**AquaVideo introduces:  
FIRST UNDERWATER CASE FOR RED DIGITAL CINEMA EPIC**

AquaVideo has released a new version of its underwater housing system for Red Digital Cinema camera systems. The AquaVideo™ housing is designed for the Epic-M, Epic-X and Epic-S 5K digital cinema cameras, and follows on its highly successful housing for the RedOne. New features include the addition of full-function Redmote control, more lens control choices, and ergonomic enhancements for easier handling underwater.

The housing utilizes an Aluminum or lightweight PVC Body, high resolution fully corrected, dome port underwater optics, complete control of camera functions, Macro and flat ports, and quick, easy installation. NAB introductory price: PVC: \$5795 /Aluminum: \$7895. Redmote underwater case \$1295

The housing uses a number of safety features including: X-ring double main seals for high reliability and clear Acrylic backplates for full visibility of main seals and an internal LCD monitor. Both the Aluminum and PVC versions are rated for working depths to 225 feet and have proven reliability in documentary, promotional, commercial, and broadcast work. Greater depth ratings can be provided through use of special backplates and ports.

AquaVideo underwater video systems are in use throughout the world by television networks, documentary and feature film producers, oceanographic institutes, the U.S. Navy, Army, NASA, etc. (See client list at [www.aquavideo.com](http://www.aquavideo.com))

The company also manufactures housings for other professional cameras, consumer-type camcorders and other environmental video systems, as well as the new (Patent Pending) Aero3D™ lightweight and moderately priced professional beamsplitter/mirror 3D camera rig for abovewater use - Atlantis3D™ underwater beamsplitter 3D rig coming soon.)
